CYPRESS, CA - May 01st Klear.ai announced today their inclusion in the 2023 RMIS Report [published by Redhand Advisors]

Klear.ai continues to demonstrate its leadership and expertise in risk, claims, and analytics software solutions with an exceptionally strong result in the 2023 RMIS Report.

CEO Brijesh Kumar expressed his enthusiasm with the results, saying, "We are thrilled to be seen as a leading vendor in terms of product features and functions and most importantly customer satisfaction. Our smart native AI-based Claims, Risk, and Analytics platform has taken the Risk Management space by storm. We are excited that our users see our system's value and can easily obtain organizational adoption. Our focus on understanding user needs directly correlates to their exceptional implementation and customer experience."

The RMIS report is a comprehensive review of the risk management information system (RMIS) and RiskTech market and vendors. The user survey gathers feedback on RMIS usage and needs.

"Our ranking clearly shows that we have the most modern and comprehensive Risk, Claims, and Analytics software solution that truly delivers value to our customers. It is important to us that we not only provide solutions but also ensure our users are able to effectively integrate features such as data analytics into their business processes for optimal outcomes," states Kumar.

As pointed out in the Report, Klear.ai's recent acquisition of the Inform Risk Management business from the Cloud Software Group further strengthens their RMIS capabilities adding to Klear.ai's already strong claims

administration solution. This positions Klear.ai to empower companies to better manage the ever-increasing complex risk landscape, with advanced analytics capabilities and insights.

Klear.ai's highly configurable and secure platform offers many benefits including:

- A modern and comprehensive risk, claims, and analytics solution on one platform
- Designed and architected with native AI as opposed to "add-on" AI approaches, making user adoption easy and seamless
- Elevates the type and amount of automation workflow and intelligent recommendations that can be configured
- Effectively uses AI models and performance management for risk mitigation in areas such as fraud, abuse, and waste.

The authors of the RMIS Report are respected industry experts Patrick O'Neill and David Tweedy. The report is designed to provide buyers with an unbiased, comprehensive analysis to evaluate leading vendors, technology, and market trends in the RMIS space.
